## **Quality Management System - Statement of Policy**

Greens Power Ltd is at the forefront of Steam Generation and Waste Heat Recovery Technology. Expertise includes the recovery of waste heat from boiler and process flue gas streams in both land and marine environments and conventional build technology for steam and hot water generation.

In addition Greens Power Ltd provides expertise through both its Wakefield Base, and overseas group companies in the form of manufacturing, repairs, maintenance, spares, servicing and commissioning of Marine and Land Boiler equipment.

The company aims to continually develop energy saving solutions to increase thermal efficiency or to convert waste heat into useful energy by assisting customers to improve their manufacturing processes thus reducing the quantity of harmful emissions emitted.

In accordance with these aims the company has established a management system that conforms to the international Quality Management Standard ISO 9001:2008.

We are committed to both maintaining and improving the management system processes through periodic reviews and by monitoring its effectiveness through the use of measurable objectives.
