

Heat Exchanger Services

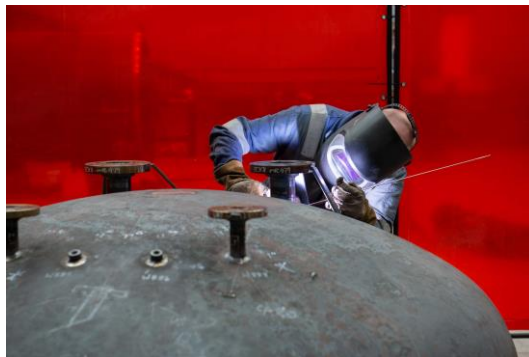

Our partnership with Thornhill Group means that we can meet your shell & tube, air cooler and plate heat exchanger needs for new equipment, installations or repairs and refurbishments to your existing units.

Thornhill Group is the only UK provider of the complete cycle of heat exchanger services encompassing thermal & mechanical design, manufacturing, installation, repairs and servicing. Its primary target markets are oil and gas, power generation, industrial, rail, marine, steel, food & drink, chemical, nuclear and utilities.

Thornhill has achieved all relevant certifications and is experienced in designing to international codes.

In their factories they can undertake servicing and inspection of heat exchanger units to provide customers with detailed photographic reports, reasons for failure and recommendations for their repair or replacement which their team of specialist engineers can then implement if required. Their onsite Inspection Engineers assist in the condition assessment of heat exchangers and/or their component parts to determine what can be repaired and what requires replacement.
